PROFESSIONAL SUMMARY

IT Support Technician with hands-on experience providing responsive technical support across multiple locations, administering Microsoft 365 and Active Directory/Azure AD (Entra ID) user accounts, and resolving customer-facing IT and security-system problems via helpdesk ticketing systems, remote tools, and in-person support. Adept at diagnosing hardware, software, and network issues, provisioning and revoking user access in line with security best practices, and producing clear documentation and knowledge base articles that support end users and reduce recurring issues. Working knowledge of core networking fundamentals (VPN, DHCP, DNS, IPv4 addressing, firewall configuration) and cybersecurity best practices including access control and threat mitigation. Holds CompTIA Security+ and A+ certifications. Comfortable working independently, collaborating with cross-functional teams, and adapting quickly in dynamic, fast-paced technical environments.

EXPERIENCE

Remote Support Technician (Technical Analyst)

2023 – Present

Boleaum Inc

Remote

- Provided remote technical support to 50+ end users, diagnosing and resolving Microsoft 365, Active Directory, and Azure AD (Entra ID) account issues, achieving a 90% first-response resolution rate.
- Managed user account provisioning, password resets, and access permissions in Active Directory/Entra ID while maintaining compliance with access control and verification policies.
- Reviewed recurring problem tickets, built action plans, and coordinated resolutions with developers and QA teams over remote channels, reducing recurring incidents by 25%.
- Documented all troubleshooting steps and system changes in the ticketing system, improving resolution efficiency by 30% and creating a reliable knowledge base for future tickets.

Digital Skills & AI Readiness Intern

Jul 2026 – Aug 2026

SpaceBeacon Foundation

Abbotsford, BC (6-week program)

- Built and deployed Food Bank Helper, a voice-first, multilingual (7-language) support-assistant proof of concept for the Archway Food Bank, fixing cross-browser voice/session bugs and integrating real organizational data end to end.
- Collaborated with fellow interns to design and deliver digital-readiness frameworks aimed at improving technology access and support for residents across the Fraser Valley region.
- Presented internship project outcomes directly to a Member of Parliament, translating technical work into clear, non-technical language for a public-sector audience.

Cybersecurity Lab Assistant

Sept 2025 – Dec 2025

University of the Fraser Valley

Abbotsford, BC

- Diagnosed system and network issues for students using Wireshark, focusing on IPv4 traffic analysis, port behavior, and anomaly detection to support hands-on troubleshooting.
- Coordinated with faculty to review recurring lab issues, develop remediation plans, and maintain detailed records of system configurations and corrective steps.
- Supported 30+ students with secure networking concepts including firewall rules, IP whitelisting, and access control, translating technical concepts for a non-technical audience.

Sales Coordinator

May 2023 – Present

Marshalls

Abbotsford, BC

- Delivered frontline customer support and issue resolution in a high-volume retail environment, managing expectations and explaining solutions clearly to a wide range of customers.
- Operated and monitored in-store security systems, including burglar alarm panels, arming/disarming, responding to triggered alerts, and coordinating with security personnel during incidents.
- Ensured reliable transmission of alarm signals to the monitoring center by following proper activation, reset, and documentation protocols after each event.
- Trained 5+ new employees on POS systems, operational workflows, and support procedures, reinforcing consistent customer-service standards.

EDUCATION

University of the Fraser Valley

Jan 2023 – Apr 2026

Bachelor of Computer Information Systems, GPA: 3.66

Abbotsford, BC

- Relevant Coursework: Software Engineering, Operating Systems, System Administration, Network Security, Cryptography, Malicious Software and Attack Prevention

CERTIFICATIONS

CompTIA A+ — CompTIA

CompTIA Security+ — CompTIA

AWS Certified Cloud Practitioner — Amazon Web Services

FoodSafe Level 1

TECHNICAL SKILLS

Systems & Support: Microsoft 365 administration, Active Directory, Azure AD (Entra ID), Windows, Linux, remote support, ticketing systems (Zendesk, SLA management, ticket routing), user access management

Networking: IPv4 networking, VPN, DHCP, DNS, port forwarding, IP whitelisting, firewall configuration, Wireshark, network troubleshooting

Security: Access control, burglar alarm/security systems, malware analysis, TLS/HTTPS, vulnerability assessment, threat detection

Programming: Python, JavaScript, SQL, Bash, PowerShell, Java, C#, Go

Cloud & Tools: AWS, Azure, GCP, Docker, Git, Postman, Linux CLI, Power BI, Tableau

PROFESSIONAL SKILLS

Customer Communication: Manages expectations and explains complex technical issues clearly to both technical and non-technical audiences

Collaboration: Coordinates effectively with internal teams and external partners to resolve system challenges

Compliance & Documentation: Maintains thorough records of troubleshooting steps, system changes, and verification procedures

Problem Solving: Reviews problem accounts, creates action plans, implements proactive solutions, and monitors outcomes

Adaptability: Quickly learns new tools and platforms, thrives in fast-paced and evolving environments

TECHNICAL PROJECTS

Adakole Ticketing System (MSP Service Desk) | *React, Node.js, PostgreSQL, Vercel* | GitHub | Live Demo

- Built a full-stack IT service desk modeled on Zendesk and ServiceNow for a managed service provider, consolidating email, chat, web form, social, and phone requests into one queue with unique ticket IDs, categories, tags, and custom fields.
- Implemented automated routing using ordered keyword/category/channel rules with optional AI triage (Claude API), assigning each ticket to the best-matched agent by skills and current workload.
- Engineered SLA tracking for first-response and resolution targets by priority, pausing the clock while tickets await customer reply and flagging breaches in the agent queue.
- Added private internal notes, macros, a self-service knowledge base with ticket deflection, and reporting dashboards for SLA compliance, peak times, and agent performance, with role-based access for admins, agents, and clients.

Active Directory Home Lab (POC) | *Windows Server, VirtualBox, PowerShell*

- Built a self-contained Active Directory lab in VirtualBox, deploying a Windows Server Domain Controller, promoting it to host a new forest, and configuring DNS and DHCP to support domain services.
- Structured the directory with custom Organizational Units (IT, HR, Workstations) and provisioned user accounts, creating a realistic environment for account management and access control practice.
- Joined a separate Windows client VM to the domain by pointing its DNS to the Domain Controller's static IP, then implemented Group Policy Objects to enforce password policies, security settings, and mapped network drives across OUs.
- Configured static IP addressing and internal network adapters in VirtualBox to ensure reliable, isolated communication between the client and Domain Controller.

Food Bank Helper (POC) | *React, Node.js, Anthropic API, Supabase* | GitHub | Live Demo

- Developed a voice-first, multilingual (English, Punjabi, German, Vietnamese, Tagalog, Spanish, Mandarin) support assistant for the Archway Food Bank as a SpaceBeacon Foundation internship deliverable, grounded on real published food-bank data.
- Built a 4-page React site (Home, Ask the Assistant, Visiting & FAQ, Contact) with a Node.js API layer that routes conversational requests to the Claude API and escalates unanswerable questions to a one-tap “Call the Food Bank” flow.
- Diagnosed and resolved cross-browser voice/session bugs, including a fixed-timer recording bug that ignored the Stop button, iOS autoplay restrictions blocking spoken replies, and a routing bug causing blank screens on direct-load or refresh.
- Hardened error handling so backend/API failures surface as real errors instead of silently returning a generic “I don’t know” response, preventing a broken backend from masquerading as a working assistant.
- Implemented Supabase-backed data collection and used prompt caching to keep repeated context tokens low-cost across requests.

Fitness Tracker Web Application | *React, Node.js (Strapi)* | GitHub | Live Demo

- Developed a full-stack fitness tracking application using React on the front end and a Strapi (Node.js) backend, with user authentication and role-based access control to protect user data.
- Designed and documented RESTful APIs with structured permission levels, supporting future troubleshooting, maintenance, and third-party integration work.

Secure Client-Server Communication | *Python* | GitHub

- Collaborated on a client-server key exchange system for communicating safely over an unsecure connection, implementing asymmetric (public/private key) encryption to establish a secure handshake.
- Used HKDF to derive matching symmetric session keys on both client and server from the exchanged public keys, then applied the session key to encrypt and decrypt message traffic.
- Diagnosed and documented man-in-the-middle vulnerabilities inherent to the unauthenticated handshake, and researched mitigation approaches such as Ed25519 message authentication and certificate authorities.

Crypto Dashboard | *React, Vite, Recharts* | GitHub | Live Demo

- Built a responsive, dark-themed cryptocurrency dashboard displaying real-time market data from the CoinGecko API, with interactive price charts (Recharts) and a coin-detail view.
- Implemented multi-page routing, search/filter functionality, and a fully responsive layout; deployed and configured on Vercel.
